

Data Structures

Sorting Technique - Insertion Sort

CODE
FOR THINGS

Introduction

Introduction

Insertion Sort:

- It is a simple sorting algorithm that builds the final sorted array(or list) one item at a time

Introduction

Insertion Sort:

- It is a simple sorting algorithm that builds the final sorted array(or list) one item at a time
- It is an in-place comparison-based algorithm

Insertion Sort

- arr[SIZE]

SIZE = 5

Insertion Sort

- arr[SIZE]

SIZE = 5

23	78	45	8	32
arr[0]	arr[1]	arr[2]	arr[3]	arr[4]

Insertion Sort

- arr[SIZE]

SIZE = 5

Sort		Unsorted		
23	78	45	8	32
arr[0]	arr[1]	arr[2]	arr[3]	arr[4]

Insertion Sort

- arr[SIZE]

SIZE = 5

Insertion Sort

- arr[SIZE]

SIZE = 5

key < arr[0]

78 < 23
↓

Insertion Sort

- arr[SIZE]

SIZE = 5

key < arr[0]

78 < 23

32 < 78

32 < 45

32 < 23

Algorithm

Insertion Sort(arr,size)

```
for i = 1 upto size
    key = arr[i]
    j = i - 1
    while ( j >= 0 AND arr[j] > key)
        arr[j+1] = arr[j]
        j = j - 1
    arr[j+1] = key
return e_true
```

Insertion Sort

Advantages

- It exhibits a good performance when dealing with a small list.
- The insertion sort is an in-place sorting algorithm so the space requirement is minimal..

Insertion Sort

Advantages

- It exhibits a good performance when dealing with a small list.
- The insertion sort is an in-place sorting algorithm so the space requirement is minimal..

Disadvantages

- It requires n-squared processing steps for every n number of elements to be sorted.
- Time complexity = $O(n^2)$

Code - Insertion Sort
